

Claims

What is claimed is:

- 5 1. A napkin and condiment holder with turnable roasting fork device comprising:
 a napkin and condiment holder comprising a metal plate formed into an L-shape with
 a bottom horizontal portion of the plate adapted as a base to support napkins and
 condiments thereon and a vertical portion serving as a heat shield and a first napkin
 support on a working end of the device, a vertical frame member spaced apart from the
10 heat shield by a portion of the length of the bottom plate, the vertical frame member
 extending vertically from the bottom plate to serve as a second napkin support with
 napkins resting on the bottom plate between the heat shield and the vertical frame
 member, a horizontal frame member attached to and extending from the vertical frame
 member partway up the vertical frame member on a side away from the heat shield, the
15 horizontal frame member extending out to a end of the bottom plate opposite to the heat
 shield, the horizontal frame member adapted to serve as a retainer for condiment
 containers resting on the bottom plate, a first vertical ring attached to a top edge of the
 heat shield in the center of the heat shield parallel to the heat shield and a second vertical
 ring attached to a top edge of the vertical frame in the center of the vertical frame parallel
20 to the vertical frame with the two vertical rings aligned;
 a long-handled fork slidably insertable between the rings, the long-handled fork
 comprising a working fork end having at least two fork thongs protruding therefrom, the
 working fork end adapted for receiving and retaining at least one food item thereon, the

working fork end protruding beyond the heat shield on the working end of the device and the long-handled fork further comprising a gripping handle portion attached to the long handled fork at an end opposite to the working fork end, the gripping handle portion adapted for holding and turning the long handled fork, the gripping handle portion

- 5 adapted for extending beyond an end of the device opposite to the working end of the device, the device adapted for resting on a surface adjacent to an external heat source and positioning the working fork end over an external source of heat with at least one food item on the working fork end with the gripping handle portion adapted for being turned to turn the at least one food item over the external heat source for roasting.

10

2. The device of claim 1 wherein the long handled fork comprises at least two separable pieces, a handle portion and a separable working fork end adapted to be separably attachable to the handle portion so that the working fork end is adapted for removing for cleaning and separate storage and the handle portion is adapted for being positioned in the rings to serve as a handle for lifting the napkin and condiment holder.

- 15 3. The device of claim 2 wherein the working fork end comprises two spaced apart prongs and the device further comprises a horizontal cross bar attached to the vertical frame member and two horizontal rings attached to the cross bar in a spaced apart a sufficient distance to receive the prongs inserted therein with the ends of the prongs resting on the bottom plate when the fork is not in use.

4. The device of claim 1 further comprising a horizontal support rod between the heat shield and the vertical frame member at the location of the two rings to assist in maintaining the rigid structure of the device and also serve as a handle.
